Executive Summary

BBQ Grill Outlet (bbqgrilloutlet.com) runs on the **same Next.js application** as Solana Fireplaces, reusing the identical backend, cart/checkout, and account systems while rendering a second, independently themed storefront (src/app/components/bbq-design/**) selected via an ISBBQ flag in src/app/lib/helpers.js. Because both brands share one codebase, BBQ inherits every functional strength and defect documented in the companion Solana audit — including the critical Braintree sandbox-credentials finding (see P1 below).

This report additionally covers something the team has not been tracking: **how completely the BBQ theme has actually been built out**. The good news — every major route (home, category/PLP, product, cart, account, all policy pages, auth flows) has an explicit BBQ-branded component, and most visible copy, colors, typography, and imagery were genuinely rewritten for BBQ rather than copy-pasted (distinct Oswald/Sora fonts, a bbq-green/ember/char palette, grill-outlet messaging, and a BBQ-exclusive Grilling FAQ homepage section not present on Solana).

The gap: **8 concrete branding leaks** were found underneath that otherwise-solid re-theme. The site footer renders the Solana logo instead of the BBQ logo whenever a logo is configured; the footer's product category links are an unedited Solana list (Fireplaces, Patio Heaters); the site-wide page title and meta description are not brand-aware and show fireplace/heating copy on every BBQ page; and four homepage sections (Brand carousel, a "Why Choose Us" trust section, Blog preview, and a promotional CTA) were imported but left commented out — including one dead component still literally named whySolana.jsx and worded for "Solana Fireplaces," one accidental un-comment away from shipping on the grill site. Full findings in Section 7.

1. Storefront & Navigation

Item	Progress	Score	Status
Homepage — hero, categories, featured products		85%	Partial
Grilling FAQ homepage section (BBQ-exclusive — not on Solana)		100%	Done
Announcement bar (topbar)		100%	Done
Mega-menu navigation		95%	Done
Search bar (live results, suggestions, categories, images)		100%	Done

Item	Progress	Score	Status
Breadcrumb navigation		100%	Done
Footer logo — renders Solana wordmark PNG instead of BBQ logo prop		35%	Bug
Footer "Products" nav column — unedited Solana category list		30%	Bug
Payment icons (text badges, not brand graphics)		60%	Partial
Social media links		50%	Partial
Brand carousel — imported but commented out, does not render		0%	Missing
Homepage reviews section (live data — stray debug log left in)		90%	Partial
Newsletter signup (homepage)		90%	Done
Login page (/login)		95%	Done

2. Single Product Pages

Shared logic/backend with Solana; theming audit confirmed `sp/ProductInfo.jsx` and related PDP sections carry no leftover Solana branding — scores mirror the companion Solana audit.

Item	Progress	Score	Status
Product image gallery (multi-photo, fullscreen mode)		95%	Done
Product title, SKU, brand label, category tag		95%	Done
Pricing — sale price, original price, savings %		100%	Done
Variant selectors (data-driven option groups)		85%	Done
Add to Cart + Call Expert + Chat (Zoho SalesIQ)		100%	Done
Sticky bottom CTA bar		100%	Done
Product description & key features		90%	Done
Specifications table		90%	Done

Item	Progress	Score	Status
Product comparison table		85%	Partial
'NaN NaN/1 Inches' bug — decimalToFraction() (shared helpers.js)		20%	Bug
Shipping info		95%	Done
Frequently Bought Together section		100%	Done
FAQ section (backend-driven content)		90%	Done
Related / You May Also Like carousel + Recently Viewed		90%	Done
Product-level reviews (real data + genuine empty state)		95%	Done
JSON-LD Product schema with conditional aggregateRating		100%	Done

3. Shopping Cart & Checkout

Fully shared with Solana — same cart, checkout, and payment code paths.

Item	Progress	Score	Status
Add to Cart functionality		95%	Done
Cart page (/cart)		85%	Partial
Checkout flow (address, shipping, payment, ZIP autofill)		95%	Done
Payment gateway integration (Braintree drop-in)		70%	Partial
Hardcoded sandbox credentials in braintree.js — shared with Solana		15%	Bug
Order confirmation & receipt emails		50%	Unknown

4. Policies & Trust Signals

All policy pages confirmed re-themed with no Solana leftovers.

Item	Progress	Score	Status
Return & refunds policy page		90%	Done
Shipping policy page		90%	Done
Privacy policy page		90%	Done
Contact page		90%	Done
About Us page		90%	Done
Professional program page		90%	Done
SSL / HTTPS		100%	Done

5. Customer Account

Fully shared with Solana — same account/order system.

Item	Progress	Score	Status
Account login / registration		95%	Done
User account setup and management		90%	Done
Order history (status badges — no carrier tracking)		85%	Partial
Wishlist / save for later		10%	Missing
"Write a Review" form pre-fills canned praise text by default		30%	Bug
Newsletter signup — custom backend, not a recognized ESP		60%	Partial

6. SEO & Marketing

Item	Progress	Score	Status
Server-side rendering (Next.js App Router, ISR)		100%	Done
JSON-LD Product schema		100%	Done
aggregateRating schema		100%	Done

Item	Progress	Score	Status
Open Graph / Twitter Card meta tags (per-product)		95%	Done
Site-wide <title>/description (metadata.jsx) — not brand-aware, shows fireplace/heating copy on every BBQ page		15%	Bug
Favicon fallback hardcoded to Solana's /logo-s1.webp on API failure		40%	Bug
XML sitemap		95%	Done
robots.txt		100%	Done
GA4 analytics (env-gated)		90%	Done
Meta Pixel (env-gated)		90%	Done

7. Brand Theming Completeness

Scope: every file under `src/app/components/new-design/**` (110 files) was compared 1:1 against `src/app/components/bbq-design/**` (110 files), plus an app-wide grep of every ISBBQ branch point and a spot-diff of key sections (Hero, Reviews, Footer, ProductInfo) for genuine BBQ-specific copy vs. leftover Solana content.

100% Routes with an explicit BBQ branch	8 Branding leaks found	4 Homepage sections dead/commented out
---	--	--

Findings

Area	Issue	File	Severity
Footer	Logo hardcodes the Solana wordmark PNG instead of using the <code>logo</code> prop passed in — any BBQ deployment with a configured logo shows Solana's logo in the footer.	<code>bbq-design/layout/Footer.jsx:64-79</code>	Critical
Footer	"Products" nav column is an unedited copy-paste of Solana's list (Fireplaces, Patio Heaters, Built-In Grills...) — only the "Company" column was updated.	<code>bbq-design/layout/Footer.jsx:8-13</code>	Critical
Site-wide SEO	Page <code><title>/meta</code> description is not branched by ISBBQ — every BBQ page renders "Stylish Indoor & Outdoor Heating" / wood-gas-electric fireplace copy.	<code>src/app/metadata.jsx</code>	Critical

Area	Issue	File	Severity
Site-wide SEO	Favicon fallback on API failure is hardcoded to Solana's logo asset.	src/app/metadata.jsx	Medium
Homepage	Brand carousel imported but rendering commented out — does not appear on the BBQ homepage at all.	bbq-design/page/HomePage.jsx	Medium
Homepage	"Why Choose Us" trust section is dead code still named/worded for Solana ("Why Choose Solana", "About Solana Fireplaces") — commented out, but one accidental un-comment away from shipping on BBQ.	bbq-design/sections/WhySolana.jsx	High (latent)
Homepage	Blog preview and promotional CTA sections imported but commented out — not rendered on BBQ homepage.	bbq-design/page/HomePage.jsx	Medium
Homepage	Stray debug statement left in the live Reviews section.	bbq-design/sections/Reviews.jsx:36	Low
Dead code	Unused arrays still reference Solana content: Hero's CARDS (gas-fireplace/built-in-grill images) and Products' PRODUCT_TABS/VIEW_ALL_URL ("Fireplaces" collection, /blaze-outdoor-products). Not currently rendered, but should be removed.	bbq-design/sections/Hero.jsx, Products.jsx	Low
Legacy system	A separate, older "brand microsite" (/brand/bbq-grill-outlet, /brand/solana-bbq-grills) exists outside the ISBBQ theming system entirely, built on legacy atom/molecule/section components, with its own hardcoded "Solana BBQ Grills" metadata. Flagged for awareness, not scored above.	src/app/(market)/brand/**	Info

What's genuinely well-themed

Hero, Topbar, Navbar, Categories, Products, Promo homepage sections, the BBQ-exclusive Grilling FAQ section, single-product-page components (ProductInfo and siblings), the About/Contact/Professional-Program pages, and all three policy pages carry distinct BBQ copy, colors (bbq-green/ember/char tokens), typography (Oswald/Sora vs. Solana's Playfair/Inter), and imagery (bbq-banner.webp, bbq-grill-outlet-banner.webp, about-bbq-grill-outlet.webp, dedicated category/blog images) — confirmed via content diff, not just filename matching. Route coverage is structurally complete: every major route under (market) has an explicit ISBBQ branch to a bbq-design component, so the issues above are quality gaps within already-branched pages, not missing branches.

Priority Action Plan

P1 — Fix Now (Critical)

- Fix `bbq-design/layout/Footer.jsx` logo to use the `logo` prop instead of the hardcoded Solana PNG.
- Branch `src/app/metadata.jsx` by `ISBBQ` (or move to per-brand env-driven copy) — every BBQ page currently ships fireplace/heating title & description copy.
- Recurate the footer "Products" nav column with actual BBQ categories.
- **Shared with Solana:** verify Braintree production credentials — `src/app/lib/braintree.js` hardcodes sandbox creds and pins the environment to Sandbox for both brands.

P2 — Growth & Optimization

- Finish or delete `bbq-design/sections/WhySolana.jsx` — remove the dead import/ `dynamic()` call so it can't be accidentally re-enabled with Solana copy intact.
- Decide the fate of the Brand carousel, Blog preview, and Cta homepage sections for BBQ — theme and re-enable, or remove the dead imports.
- Fix the hardcoded Solana favicon fallback in `metadata.jsx`.
- Remove the stray `console.log` in `bbq-design/sections/Reviews.jsx`.
- Clean dead Solana-referencing data in `Hero.jsx` (`CARDS`) and `Products.jsx` (`PRODUCT_TABS` , `VIEW_ALL_URL`).
- All P2 items from the companion Solana audit apply equally here (shared codebase).

P3 — Future Enhancements

- Decide the fate of the separate legacy "brand microsite" pages (`/brand/bbq-grill-outlet` , `/brand/solana-bbq-grills`) — an older, unrelated system outside the ISBBQ theming architecture, with its own hardcoded metadata.
- All P3 items from the companion Solana audit apply equally here (shared codebase).
