

Executive Summary

Solana Fireplaces (solanafireplaces.com) is a Next.js e-commerce site on Vercel selling premium indoor/outdoor heating and kitchen products from 20+ brands including Blaze, Bull, Twin Eagles, Napoleon, Broomic, Delta Heat, and more. The site is now in full ecommerce mode — cart, checkout, payment, and user accounts are all live and functional.

Based on the latest full live crawl, the site is **99% ready** — essentially a fully operational ecommerce store. All major systems are confirmed working: complete product pages with variant selectors, pricing, specs, and carousels; live chat active in the sticky bar; Open Graph and Twitter Card meta tags confirmed; JSON-LD Product schema verified via Google Rich Results Test; sitemap submitted; 10+ blog articles indexed in Google; and now cart, checkout, payment, and user account management all live.

Two minor data bugs remain: 'NaN NaN/1 Inches' in the product comparison table and a compare price data entry error on the Napoleon Rotisserie Basket (\$79.99 sale vs \$83,988 original). Product reviews show 0 on individual pages — intentional, still in gathering phase. aggregateRating schema and GA4/Meta Pixel still to be added for full SEO and marketing capability.

1. Storefront & Navigation

Item	Progress	Score	Status
Homepage — hero, categories, featured products		100%	Done
Announcement bar (free shipping, phone, contractor program)		100%	Done

GA4 / analytics tracking		40%	Unknown
Meta Pixel (ad retargeting)		0%	Missing
Compare price data entry errors (Napoleon basket: \$79.99 vs \$83,988)		0%	Bug

Priority Action Plan

P1 — Fix Now (Minor remaining issues)

- Fix 'NaN NaN/1 Inches' in product comparison table — cutout dimensions for one model rendering as NaN
- Audit all product compare prices — Napoleon Rotisserie Basket shows \$79.99 sale vs \$83,988 original; check all products for similar data entry errors
- Add aggregateRating to JSON-LD Product schema to unlock gold star ratings in Google search results
- Set up GA4 analytics to track cart activity, call clicks, and conversions
- Connect homepage newsletter signup to email platform (Klaviyo or Mailchimp)

P2 — Growth & Optimization

- Monitor Google Search Console — product & category pages still processing through Google index (normal)
- Add unique keyword-rich meta descriptions per product to improve Google click-through rates
- Add Meta Pixel for Facebook/Instagram ad retargeting and purchase tracking
- Add 'Request a Quote' contact form on single product pages for additional lead capture
- Continue gathering product-level reviews — link to individual pages once collected
- Complete order confirmation email templates and test end-to-end

P3 — Future Enhancements

- Stock / availability indicators per product variant
 - Wishlist / save for later full implementation
 - Core Web Vitals audit — image optimization for large product galleries
 - Programmatic SEO — unique meta titles and descriptions at scale for 6,000+ products
 - Loyalty / rewards program for repeat customers
-

Report generated May 12, 2026 via live crawl of solanafireplaces.com (production domain). Cart, checkout, payment gateway, and user account confirmed live per owner. Scores reflect publicly visible front-end and server-side rendered content. Google indexing confirmed via site:solanafireplaces.com search. JSON-LD schema verified via Google Rich Results Test. Backend integrations (GA4, Meta Pixel, newsletter) marked Unknown/Missing cannot be verified without codebase access.
