Executive Summary

Solana Fireplaces (solanafireplaces.com) is a Next.js e-commerce site on Vercel selling premium indoor/outdoor heating and kitchen products from 20+ brands including Blaze, Bull, Twin Eagles, Napoleon, Broomic, Delta Heat, and more. This report is a full **source-code audit** of the new-design theme — unlike the prior live-crawl audit, scores here reflect what the code actually does (data wiring, edge cases, and defects), not just what renders on the page.

The storefront is functionally strong: complete product pages with data-driven variant selectors, live search with images/suggestions, mega-menu navigation, a working cart/checkout/payment flow (Braintree), JSON-LD Product schema with conditional aggregateRating, GA4 and Meta Pixel wiring, a dynamic XML sitemap, and a homepage reviews section that now pulls real average rating and review counts from /api/reviews/list instead of hardcoded placeholder numbers.

The audit surfaced **one critical issue requiring immediate verification**: src/app/lib/braintree.js hardcodes Braintree sandbox credentials directly in source and pins the environment to Sandbox rather than reading from environment variables — this needs to be confirmed as overridden in production before checkout is treated as fully launch-ready. Other findings: the long-standing 'NaN NaN/1 Inches' bug is still structurally unfixed at its root cause; wishlist/save-for-later is UI-only with no persistence; and the "Write a Review" form pre-fills canned praise text by default, risking accidental fake review submissions.

1. Storefront & Navigation

Item	Progress	Score	Status
Homepage — hero, categories, featured products		95%	Done
Announcement bar (free shipping, phone, contractor program)		100%	Done
Mega-menu navigation (multi-column, mobile accordion)		95%	Done
Search bar (live results, suggestions, categories, images)		100%	Done
Breadcrumb navigation		100%	Done
Footer — links, policies, social, newsletter		80%	Partial

Item	Progress	Score	Status
Payment icons (rendered as text badges, not brand graphics)		60%	Partial
Social media links (Facebook, Pinterest only)		50%	Partial
Brand carousel (animated marquee — text names, not logos)		70%	Partial
Homepage reviews section (live rating & count via useReviews())		100%	Done
Newsletter signup (homepage, custom backend)		90%	Done
Login page (/login)		95%	Done

2. Single Product Pages

Item	Progress	Score	Status
Product image gallery (multi-photo, fullscreen mode)		95%	Done
Product title, SKU, brand label, category tag		95%	Done
Pricing — sale price, original price, savings %		100%	Done
Variant selectors (data-driven option groups)		85%	Done
Add to Cart + Call Expert + Chat (Zoho SalesIQ)		100%	Done
Sticky bottom CTA bar (price, save, call, chat, cart)		100%	Done
Product description & key features		90%	Done
Specifications table		90%	Done
Product comparison table		85%	Partial
'NaN NaN/1 Inches' bug — decimalToFraction() has no guard against non-numeric spec values (helpers.js:596)		20%	Bug
Shipping info (weight, dimensions, carrier, ETA)		95%	Done

Item	Progress	Score	Status
Frequently Bought Together section		100%	Done
FAQ section (backend-driven content)		90%	Done
Related / You May Also Like carousel + Recently Viewed		90%	Done
Product-level reviews (real data + genuine empty state)		95%	Done
JSON-LD Product schema with conditional aggregateRating		100%	Done

3. Shopping Cart & Checkout

Item	Progress	Score	Status
Add to Cart functionality		95%	Done
Cart page (/cart) — full page, no mini-cart drawer		85%	Partial
Checkout flow (address, shipping, payment, ZIP autofill)		95%	Done
Payment gateway integration (Braintree drop-in)		70%	Partial
Hardcoded sandbox credentials in braintree.js, not env-driven		15%	Bug
Order confirmation & receipt emails		50%	Unknown

"Unknown" = handled by an external backend service (NEXT_SOLANA_BACKEND_URL), not visible in this repository.

4. Policies & Trust Signals

Item	Progress	Score	Status
Return & refunds policy page		90%	Done
Shipping policy page		90%	Done
Privacy policy page		90%	Done
Contact page (phone, email, hours)		90%	Done

Item	Progress	Score	Status
About Solana page		90%	Done
Contractor / professional program page		90%	Done
SSL / HTTPS		100%	Done

SSL/HTTPS is a Vercel hosting-level concern and cannot be verified from source code.

5. Customer Account

Item	Progress	Score	Status
Account login / registration		95%	Done
User account setup and management (profile, password)		90%	Done
Order history (status badges, line items — no carrier tracking)		85%	Partial
Wishlist / save for later		10%	Missing
"Write a Review" form pre-fills canned praise text by default		30%	Bug
Newsletter signup — custom backend, not a recognized ESP		60%	Partial

6. SEO & Marketing

Item	Progress	Score	Status
Server-side rendering (Next.js App Router, ISR)		100%	Done
JSON-LD Product schema		100%	Done
aggregateRating schema (star ratings in Google search)		100%	Done
Open Graph / Twitter Card meta tags (per-product)		95%	Done
XML sitemap (dynamic, Elasticsearch-driven)		95%	Done
robots.txt		100%	Done

Item	Progress	Score	Status
GA4 analytics (env-gated via @next/third-parties)		90%	Done
Meta Pixel (env-gated fbq init + noscript fallback)		90%	Done

Priority Action Plan

P1 — Fix Now (Critical)

- **Verify Braintree production credentials.** `src/app/lib/braintree.js` hardcodes `sandbox merchantId / publicKey / privateKey` directly in source and pins `braintree.Environment.Sandbox` — confirm production actually overrides this and move credentials to environment variables.
- Fix the persistent **'NaN NaN/1 Inches'** bug at its root — `decimalToFraction()` in `helpers.js` needs a guard against non-numeric spec values; it currently feeds the Compare Table and other spec transforms.
- Remove the canned default review text pre-filled in the "Write a Review" modal (`my-account/OrdersPage.jsx`) — users can unintentionally publish placeholder copy under their name.
- Implement wishlist / save for later — currently local UI state only (heart icon toggle), not persisted or connected to any backend.

P2 — Growth & Optimization

- Replace text-based payment badges with real card-brand icon graphics.
- Replace the text-name brand carousel with real logo images.
- Expand social presence beyond Facebook + Pinterest.
- Add courier/shipment tracking (carrier + tracking number) to Order History, not just internal status.
- Connect newsletter signup to a recognized ESP (Klaviyo/Mailchimp), or confirm the custom backend covers full lifecycle marketing.
- Clean up unused placeholder constants left in `SingleProductPage.jsx` (`STATIC_SPECS` , `STATIC_SHIPPING` , `RELATED` , `RECENT`).

P3 — Future Enhancements

- Confirm the order confirmation/receipt email flow end-to-end (dispatched by an external backend service, not verifiable from this codebase).
- Core Web Vitals / image optimization audit for large product galleries.
- Programmatic SEO — unique meta titles & descriptions at scale for 6,000+ products.
- Loyalty / rewards program for repeat customers.

Report generated July 22, 2026 via full source-code audit of the repository at `z:\Documents\nextjs\solanafireplaces\test` (commit `0099fe3`, new-design theme). Unlike the prior live-crawl audit (May 12, 2026), scores here reflect actual implementation in code — data wiring, backend integration, and known defects — not only what is visible on the rendered page. Items marked Unknown could not be verified because they depend on an external backend service outside this repository. SSL/HTTPS and hosting-level configuration are Vercel deployment concerns and are assumed, not independently verified.
